understanding how existing scripts in repo work

script 1

```
#!/bin/bash      - shebang
echo "hello world!"      - printing hello world
name="Ashish Choudhary"  - taking Ashish choudhary in variable
name
age=18             - taking 18 in variable age

echo "My name is $name and I am $age year old." - printing
name and age
```

**OUTPUT :**

```
GNU nano 7.2                                first.sh
#!/bin/bash
echo "hello world!"
name="Ashish Choudhary "
age=18
echo " my name is $name and I am $age years old."

ashishkumar@ashishkumar:~/UPES/linux_lab/scripts$ ./first.sh
hello world!
my name is Ashish Choudhary  and I am 18 years old.
```

script 2

```
#!/bin/bash                                -shebang
a="Ashish Choudhary"                        -taking Ashish choudhary in the
variable a
b=40                                         -taking 40 in the variable b

if [ $a="Ashish CHoudhary" ] && [ $b -gt 18 ]; then      -
checking conditions and using an opeator and(&&)
    echo " you are adult "                            - printing you
are adult
fi

if [ $a=" akshat" ] && [ $b -lt 18 ]; then                -checking
conditions and using an opeator and(&&)
    echo "you are minor"                                - printing you
are minor
fi
```

```
#!/bin/bash
a="Ashish Choudhary"
b=50

if [ "$a" = "Ashish Choudhary" ] && [ $b -gt 18 ]; then
    echo " you are adult "
fi

if [ "$a" = "akshat" ] && [ $b -lt 18 ]; then
    echo " you are minor "
fi

ashishkumar@ashishkumar:~/UPES/linux_lab/scripts$ ./second.sh
you are adult
```

Q1 what is the purpose of `#!/bin/bash` at the top of the script

ANS-- the shebang line at the top of a script specifies the interpreter that should be used to run the script.

Q2 how do you make a script executable?

ANS-- 1. add the shebang at the top 2. give permission using the `chmod` command 3. run the code.
